What we do

FastoCloud is server software for video streaming used by various companies worldwide for broadcasting television programs, live streaming, remote learning, video surveillance, and much more

01

IPTV

A digital television broadcasting solution that delivers television content over the internet. It enables users to stream live TV channels, on-demand videos, and other multimedia content directly to their devices, such as smart TVs, computers, smartphones, or set-top boxes

02

OTT

A solution that helps streamers and content producers monetize their live broadcasts by retransmitting them across different platforms

03

FastoWatch

A modern video surveillance system for solving classic and special security tasks, broadcasting video from ip cameras, recording and providing remote access to distributed IP cameras and archives

What we do

We offer software for broadcasting, hardware, and cloud solutions for services of any scale and workload. Our solutions help business clients acquire, modify, store, transcode, and deliver video

04

Computer Vision

Computer vision is a field of artificial intelligence that deals with the analysis, classification, and recognition of images and videos. It trains computers to interpret and understand the visual world. By using digital images from cameras and videos, along with deep learning models, machines can accurately identify and classify objects, and then respond to what they “see”

05

FastoWebRTC

Transforms online communication by enabling real-time voice, video, and data sharing directly in web browsers and mobile apps, without plugins.

06

Social Media / Conferences

Applications for organizing video conferences that allow multiple users to join simultaneously
